Expand Your Horizons with StarFire™ and Ultra RTK.™

StarFire™ and RTK just got better.

How could we possibly improve StarFire™ and RTK? First, we doubled the number of StarFire™ satellites from three to six, providing signal redundancy and coverage all the way down to the user equipment. Then, we created Ultra RTK,™ which combined with our industry-exclusive RTK Extend,™ lets you work further from base stations and maintain RTK-level accuracy even during radio outages.

Want to double your competitive edge? Put NavCom's StarFire™ and RTK advantages to work for you. To learn more, call us at **+1 310 381 2000**.

WELCOME TO THE REVOLUTION

Introducing the **LYNX** Mobile Mapper™, a revolutionary vehicle-mounted mobile 3D survey solution that integrates Optech's advanced generation lidar sensor with a best-of-class software workflow.

The **LYNX** Mobile Mapper defines the state of the art in mobile mapping technology, generating rich survey grade lidar data from a vehicle moving at up to 100 km/hr.

Over three years in development, the **LYNX** Mobile Mapper is the definitive answer for your large-area engineering and survey work.

Welcome to the revolution.
