

EROS Speaker Series

GenAI A long way from Kansas

Lions, and tigers, and chatbots, oh my! Generative AI (GenAI) represents one of the most impactful advancements in the history of Natural Language Processing (NLP) by computational methods. Under the GenAI hood is the “Transformer” concept that laid the foundation for the development of Large Language Models (LLMs) used by chatbots. Understanding how chatbots simulate human perception and reasoning is the key to managing our expectations when utilizing them. In this session we’ll explore where GenAI’s yellow brick road takes us into a metaphorical Land of Oz.

Join Director Pete Doucette as he explores how GenAI can transform our everyday jobs at EROS.

Following the talk, we’ll open the floor for an interactive Q&A and discussion session.

This is your opportunity to share your thoughts, ask questions, and dive into how these technologies are making an impact. Bring your ideas and experiences, let’s collaborate and discuss how GenAI can shape our work at EROS.
