## Global Forecast System (GFS) Precipitation

### Point of contacts for Missing Source Data

#### NOAA

Primary Contact: Vadlamani Kumar ([vadlamani.kumar@noaa.gov](mailto:vadlamani.kumar@noaa.gov)) 301-683-3462

Secondary Contact: Nick Novella ([nicholas.novella@noaa.gov](mailto:nicholas.novella@noaa.gov)) 301-683-3458

Daily Global GFS precipitation (GFS Prec) forecast data - 7 files/day

### Subscription list for source site/data updates

GDAS and GFS - (we do not get the GFS data from here, from Kumar and Nicolas) -

<https://www.itsrv.ncep.noaa.gov/mailman/listinfo/ncep.list.nomads-ftpprd>

### Batch python script for manual recovery or operational processing

Location: D:\FEWS\DataPortal\bin

`allregions_daily_gfs.py` : runs daily GFS Prec processes for different regions. Needs to be sure to run the global raw data is available for the different regions.

USAGE: `allregions_daily_gfs.py [4-digit-year] [month(1-12)] [day(1-31)]`

## Daily

### Windows Task Scheduler

**Daily GFS Prec** windows scheduler task runs the Global and Iraq bin main scripts at **4:15 AM (CT)** every day of the month.

- `D:\FEWS\DataPortal\bin\global\daily\gfs\global_daily_gfs.py`
- `D:\FEWS\DataPortal\bin\middleeast\iraq\daily\gfs\iraq_daily_gfs.py`

### Full Documentation

Find this document under the “`additional_docs`” folder.

## Global

### FTP link to raw data

[ftp://ftp.cpc.ncep.noaa.gov/International/gfs\\_00z\\_25km/for\\_usgs/](ftp://ftp.cpc.ncep.noaa.gov/International/gfs_00z_25km/for_usgs/) (new since Jan. 16, 2015, unflipped source data). Before Jan. 16, 2015 source data was 37km and flipped from [ftp://ftp.cpc.ncep.noaa.gov/International/gfs\\_00z\\_37km/for\\_usgs](ftp://ftp.cpc.ncep.noaa.gov/International/gfs_00z_37km/for_usgs).

Backup site:[ftp://ftp.cpc.ncep.noaa.gov/International/gfs\\_00z\\_25km/for\\_usgs/](ftp://ftp.cpc.ncep.noaa.gov/International/gfs_00z_25km/for_usgs/) - when Kumar is not available and NOAA collaborators has notified the missing data is placed in this back up site.

### Python script(s)

Location in “bin” folder → `D:\FEWS\DataPortal\bin\global\daily\gfs`

- `global_daily_gfs_config.py` → Configuration file.
- `global_daily_gfs.py` → Download source (raw) data from NOAA and converts it to geobIL for each forecast day.

Python script required from “lib” folder → `daily_gfs_process.py`

### Products

Download → `D:\FEWS\DataPortal\data\Global\Daily\GFSM\raw\YYYY (GZ files)`

BIL product → `D:\FEWS\DataPortal\data\Global\Daily\GFS\geobil\YYYY (TAR.GZ files)`

Graphics → `D:\FEWS\ DataPortal\data\Global\Daily\GFS\graphics (PNG files)`

### Command line

USAGE: `global_daily_gfs.py YYYY M D`

where `YYYY` is the 4 digit year .. `M` is the 1-2 digit of the month (1-12).. and `D` is the 1-2 digit of the day (1-31). `YYYY M D` is an optional input, so the default input information is today's date.

### **Example**

> `global_daily_gfs.py 2013 9 9`

## Iraq (Iraq Tigris-Euphrates)

### Product page(s) with documentation

<http://earlywarning.usgs.gov/fews/product/74>

### Python script(s)

Location in “bin” folder → D:\FEWS\ DataPortal\bin\asia\middleeast\iraq\daily\gfs

- iraq\_daily\_gfs\_config.py → Configuration file.
- iraq\_daily\_gfs.py → create geoBIL zip using the Global geoBIL zip as input and creates 6-days map graphic and uploads graphic to web server.

Python script required from “lib” folder → daily\_gfs\_process.py

### Products

BIL product → D:\FEWS\ DataPortal\data\MiddleEast\Iraq\Daily\GFS\geobil\YYYY (TAR.GZ files)

Graphics → D:\FEWS\ DataPortal\data\ MiddleEast\Iraq\Daily\GFS\graphics (PNG files)

### Command line

USAGE: iraq\_daily\_gfs.py YYYY M D

where YYYY is the 4 digit year .. M is the 1-2 digit of the month (1-12).. and D is the 1-2 digit of the day (1-31). YYYY M D is an optional input, so the default input information is today's date.

### **Example**

> iraq\_daily\_gfs.py 2013 9 9
