Description:

Abstract:

The U.S. Geological Survey (USGS) has entered into a cooperative agreement with the National Park Service (NPS) to deliver satellite imagery and derivative products centered on major fires that impact national parks and other federal lands. This data set was compiled at the request of a federal land management agency and is part of a suite of products generated for a specific fire. See the National Burn Severity Mapping web site at: http://edc2.usgs.gov/fsp/severity/fire_main.asp

Purpose:

The purpose of this project is to develop a robust mapping methodology and consistent data products that allow federal land managers and fire ecologists to evaluate and compare burn severity within individual fires and between fires across various ecosystems. These products will help land managers to more effectively plan, implement and monitor fire recovery activities.

Supplemental_Information:

Fire Name: Foraker
Park: Denali National Park
Date of Fires: 6/23/2000
Type of assessment: 1 year extended
Acres within satellite-derived fire perimeter: 17047
Landsat Path and Row: 71/15
Pre-Fire Landsat Date/Scene ID:
Landsat 5; July 21, 1985 / LT5071015008520210
Post-Fire Landsat Date/Scene ID:
Landsat 7; June 23, 2001 / LE7071015000117450
Output Dataset Projection: Albers
Datum: NAD 27
Spheroid: Clarke 1866
1st Parallel: 55 00 00 N
2nd Parallel: 65 00 00 N
Central Meridian: 154 00 00 W
Lat. of Origin: 50 00 00 N

Image subset Corner Coordinate

(center of upper left, lower right pixel, projection meters)

ULX: 84032 LRX: 110252
ULY: 1548689 LRY: 1517579

Image subset size:

#Rows: 1038
#Columns: 875
Pixel size: 30 meters

Bounding Box:

North Lat: 63 53 36 N
South Lat: 63 36 29 N
East Long: 151 45 06 W

West Long: 152 18 09 W
Latitude and Longitude within Fire Perimeter
Lat: 63 46 55 N
Long: 152 03 08 W

Fire Perimeters: Automatically digitized. Seed value 501,
distance 250. Some manual edits.

For further information on NLAPS and Landsat TM data,
please refer to the metadata documentation found on the
USGS Clearinghouse website at:

Data_Quality_Information:

Attribute_Accuracy:

Attribute_Accuracy_Report:

Three on-board calibrators (two solar, one internal) provide an absolute accuracy of 5 percent, excluding band 6.

Logical_Consistency_Report:

These Landsat data are collected from a nominal altitude of 705 kilometers in a near-polar, near-circular, sun-synchronous orbit at an inclination of 98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days. The pixels representing the bands for the image are in the data set only once.

Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual edits.

Positional_Accuracy:

Horizontal_Positional_Accuracy:

Horizontal_Positional_Accuracy_Report:

Energy reflected from Earth's surface passes through a whisk-broom scanning system and all-reflective optics before being collected by the solid-state detectors at the focal plane.

Lineage:

Process_Step:

Process_Description:

These data products are derived from Landsat Thematic Mapper data.

A pre-fire scene and a post-fire scene are analyzed to create a Differenced Normalized Burn Ratio (DNBR) image. The DNBR image portrays the variations of burn severity within the fire.

The Landsat images are terrain corrected and geometrically rectified to an Albers Conical Equal Area map projection using the National Landsat Archive Production System (NLAPS). The images are further processed to convert bands 1-5 and 7 to at-satellite-reflectance. The Normalized Burn Ratio (NBR) is computed for each date of imagery using the following formula:

$(\text{Band 4} - \text{Band 7}) / (\text{Band 4} + \text{Band 7}) = \text{NBR}$

The differenced NBR is computed by subtracting the post-fire NBR from the pre-fire NBR:

PreNBR - PostNBR = DNBR

Higher DNBR values are correlated with more severe burns. The DNBR image is evaluated to determine the threshold value between burned and unburned areas. The perimeter of the fire is delineated using the DNBR image. The DNBR image, the pre-fire and post-fire TM images, and a fire perimeter vector file are provided in digital format in the map projection used by the National Park Service.
