Description:

Abstract:

The U.S. Geological Survey (USGS) has entered into a cooperative agreement with the National Park Service (NPS) to deliver satellite imagery and derivative products centered on major fires that impact national parks and other federal lands. This data set was compiled at the request of a federal land management agency and is part of a suite of products generated for a specific fire.

See the National Burn Severity Mapping web site at:

http://edc2.usgs.gov/fsp/severity/fire_main.asp

Purpose:

The purpose of this project is to develop a robust mapping methodology and consistent data products that allow federal land managers and fire ecologists to evaluate and compare burn severity within individual fires and between fires across various ecosystems. These products will help land managers to more effectively plan, implement and monitor fire recovery activities.

Supplemental_Information:

Fire Name: Maumee, Gene Rush #2, North Tyler Bend Road, and Pruitt Complex

Agency: Buffalo National River

Land Management Unit: National Park Service

Date of Fire: 02/22/2004

Type of assessment: Extended Assessment

Acres within Fire Perimeter: 330, not visible, not visible, not visible

Landsat Path and Row: 25/35

Pre-Fire Landsat Date/Scene ID:

Landsat 5; July 21, 2003 / LT5025035000320210

Post-Fire Landsat Date/Scene ID:

Landsat 7; May 04, 2004 / LT5025035000412510

Output Dataset Projection: UTM

UTM Zone: 15

Spheroid Name: GRS80

Datum Name: NAD83

Image subset Corner Coordinate (center of upper left pixel, projection meters)

ULX: 458160 LRX: 562980

ULY: 4009560 LRY: 3966600

Image subset size:

#Rows: 1433

#Columns: 3495

Pixel size: 30 meters

Bounding Box:

North Lat: 36 13 51 N

South Lat: 35 50 36 N

East Long: 92 18 09 W

West Long: 93 27 53 W

Latitude and Longitude within Fire Perimeter:

Lat: 36 01 19 N

Long: 92 37 53 W

Fire Perimeter: Perimeter manually digitized from Landsat imagery. Point shape file provided for fires not visible in imagery. Points are at reported location for Pruitt Complex, North Tyler Bend Road, and Gene Rush #2.

For further information on NLAPS and Landsat TM data, please refer to the metadata documentation found on the USGS Clearinghouse website at:
<http://www.fgdc.gov/clearinghouse/clearinghouse.html>

Product List:

buff04b_pretm.tif
Pre-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

buff04b_postm.tif
Post-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

buff04b_dnbr
Differenced Normalized Burn Ratio (ArcInfo GRID)

buff04b_pi
Fire Perimeter (shape file) and Point File (shape file)

buff04b_hist.xls
DNBR pixel count within the fire perimeter (excel file)

d253507030504
Full Scene DNBR (ArcInfo GRID)

Data_Quality_Information:

Attribute_Accuracy:

Attribute_Accuracy_Report:

Three on-board calibrators (two solar, one internal) provide an absolute accuracy of 5 percent, excluding band 6.

Logical_Consistency_Report:

These Landsat data are collected from a nominal altitude of 705 kilometers in a near-polar, near-circular, sun-synchronous orbit at an inclination of 98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days.

The pixels representing the bands for the image are in the data set only once.

Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual edits.

Positional_Accuracy:

Horizontal_Positional_Accuracy:

Horizontal_Positional_Accuracy_Report:

Energy reflected from Earth's surface passes through a whisk-broom scanning system and all-reflective optics before being collected by the solid-state detectors at the focal plane.

Lineage:

Process_Step:

Process_Description:

These data products are derived from Landsat Thematic Mapper data.

A pre-fire scene and a post-fire scene are analyzed to create a Differenced Normalized Burn Ratio (DNBR) image. The DNBR image portrays the variations of burn severity within the fire.

The Landsat images are terrain corrected and geometrically rectified to an Albers Conical Equal Area map projection using the National Landsat Archive Production System (NLAPS). The images are further

processed to convert bands 1-5 and 7 to at-satellite-reflectance.
The Normalized Burn Ratio (NBR) is computed for each date of imagery
using the following formula:
$$(\text{Band 4} - \text{Band 7}) / (\text{Band 4} + \text{Band 7}) = \text{NBR}$$

The differenced NBR is computed by subtracting the post-fire NBR from
the pre-fire NBR:
$$\text{PreNBR} - \text{PostNBR} = \text{DNBR}$$

Higher DNBR values are correlated with more severe burns. The DNBR
image is evaluated to determine the threshold value between burned and
unburned areas. The perimeter of the fire is delineated using the DNBR
image. The DNBR image, the pre-fire and post-fire TM images, and a
fire perimeter vector file are provided in digital format in the map
projection used by the National Park Service.
