      Online_Linkage: http://edc.usgs.gov
  Description:
    Abstract:
      The U.S. Geological Survey (USGS) has entered into a cooperative
      agreement with the National Park Service (NPS) to deliver satellite
      imagery and derivitive products centered on major fires that
      impact national parks and other federal lands.  This data set was
      compiled at the request of a federal land management agency and is
      part of a suite of products generated for a specific fire.
      See the National Burn Severity Mapping web site at:
      http://edc2.usgs.gov/fsp/severity/fire_main.asp
    Purpose:
      The purpose of this project is to develop a robust mapping
      methodology and consistent data products that allow federal land
      managers and fire ecologists to evaluate and compare burn severity
      within individual fires and between fires across various
      ecosystems.  These products will help land managers to more
      effectively plan, implement and monitor fire recovery activities.
    Supplemental_Information:
      Fire Name: Hayfield Reclamation Complex
      Agency:National Park Service
      Land Management Unit: Pea Ridge National Military Park
      Date of Fire: 01/26/2004
      Type of assessment: Extended
      Acres within Fire Perimeter: 540
      Landsat Path and Row: 26/35
      Pre-Fire Landsat Date/Scene ID:
      Landsat 7; Apr. 28, 2002 / LE7026035000211850
      Post-Fire Landsat Date/Scene ID:
      Landsat 5; Apr. 25, 2004 / LT5026035000411610
      Output Dataset Projection: UTM
      UTM Zone: 15
      Spheroid Name: GRS80
      Datum Name: NAD83
      Image subset Corner Coordinate (center of upper left pixel, projection meters)
      ULX: 401340       LRX: 413040
      ULY: 4039200      LRY: 4029330
      Image subset size:
      #Rows: 330
      #Columns: 391
      Pixel size: 30 meters
      Bounding Box:
      North Lat: 36 29 37 N
      South Lat: 36 24 17 N
      East Long: 93 58 13 W
      West Long: 94 06 03 W
      Latitude and Longitude within Fire Perimeter
      Lat:  36 26 58 N
      Long: 94 01 40 W
```

```
    Fire Perimeter: Manually digitized from Landsat imagery

    For further information on NLAPS and Landsat TM data, please refer to the metadata
    documentation found on the USGS Clearinghouse website at:
    http://www.fgdc.gov/clearinghouse/clearinghouse.html

    Product List:

    hayf04b_pretm.tif
    Pre-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

    hayf04b_postm.tif
    Post-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

    hayf04b_dnbr
    Differenced Normalized Burn Ratio (DNBR) subset (ArcInfo GRID)

    hayf04b_pi
    Fire Perimeter (shape file)

    hayf04b_hist.xls
    DNBR pixel count within the fire perimeter (excel file)

    d263504020404
    Full Scene DNBR  (ArcInfo GRID)

Data_Quality_Information:
  Attribute_Accuracy:
    Attribute_Accuracy_Report:
      Three on-board calibrators (two solar, one internal) provide an absolute
      accuracy of 5 percent, excluding band 6.
  Logical_Consistency_Report:
    These Landsat data are collected from a nominal altitude of 705 kilometers
    in a near-polar, near-circular, sun-synchronous orbit at an inclination of
    98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days.
    The pixels representing the bands for the image are in the data set only once.
  Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual
edits.

  Positional_Accuracy:
    Horizontal_Positional_Accuracy:
      Horizontal_Positional_Accuracy_Report:
        Energy reflected from Earth's surface passes through a whisk-broom scanning
        system and all-reflective optics before being collected by the solid-state
        detectors at the focal plane.
  Lineage:
    Process_Step:
      Process_Description:
        These data products are derived from Landsat Thematic Mapper data.
        A pre-fire scene and a post-fire scene are analyzed to create a
        Differenced Normalized Burn Ratio (DNBR) image.  The DNBR image portrays
        the variations of burn severity within the fire.

        The Landsat images are terrain corrected and geometrically rectified
        to an Albers Conical Equal Area map projection using the National
        Landsat Archive Production System (NLAPS).  The images are further
        processed to convert bands 1-5 and 7 to at-satellite-reflectance.
        The Normalized Burn Ratio (NBR) is computed for each date of imagery
        using the following formula:
        (Band 4 - Band 7) / (Band 4 + Band 7) = NBR

        The differenced NBR is computed by subtracting the post-fire NBR from
        the pre-fire NBR:
```

```
        PreNBR - PostNBR = DNBR

        Higher DNBR values are correlated with more severe burns.  The DNBR
        image is evaluated to determine the threshold value between burned and
        unburned areas.  The perimeter of the fire is delineated using the DNBR
        image.  The DNBR image, the pre-fire and post-fire TM images, and a
        fire perimeter vector file are provided in digital format in the map
        projection used by the National Park Service.
