Description:

Abstract:

The U.S. Geological Survey (USGS) has entered into a cooperative agreement with the National Park Service (NPS) to deliver satellite imagery and derivative products centered on major fires that impact national parks and other federal lands. This data set was compiled at the request of a federal land management agency and is part of a suite of products generated for a specific fire.

See the National Burn Severity Mapping web site at:

http://edc2.usgs.gov/fsp/severity/fire_main.asp

Purpose:

The purpose of this project is to develop a robust mapping methodology and consistent data products that allow federal land managers and fire ecologists to evaluate and compare burn severity within individual fires and between fires across various ecosystems. These products will help land managers to more effectively plan, implement and monitor fire recovery activities.

Supplemental_Information:

Fire Name: 1314 Junction Rx Burn

Agency: National Park Service

Land Management Unit: Big Bend National Park

Date of Fire: 5/17/2005

Type of assessment: Extended Assessment

Acres within Fire Perimeter: 530

Landsat Path and Row: 30/40

Pre-Fire Landsat Date/Scene ID:

Landsat 5; Sep. 10, 2003 / LT5030040000325310

Post-Fire Landsat Date/Scene ID:

Landsat 5; Sep. 15, 2005 / LT5030040000525810

Output Dataset Projection: UTM

UTM Zone: 13

Spheroid Name: GRS80

Datum Name: NAD83

Image subset Corner Coordinate (center of upper left pixel, projection meters)

ULX: 624120 LRX: 711030

ULY: 3287970 LRY: 3199890

Image subset size:

#Rows: 30

#Columns: 40

Pixel size: 30 meters

Bounding Box:

North Lat: 29 42 39 N

South Lat: 28 55 01 N

East Long: 102 49 39 W

West Long: 103 43 21 W

Latitude and Longitude within Fire Perimeter:

Lat: 29 19 37 N

Long: 103 15 00 W

Fire Perimeter: Fire perimeter was provided by Big Bend National Park.

For further information on NLAPS and Landsat TM data, please refer to the metadata documentation found on the USGS Clearinghouse website at:
<http://www.fgdc.gov/clearinghouse/clearinghouse.html>

Product List:

jurx05b_pretm.tif
Pre-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

jurx05b_postm.tif
Post-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

jurx05b_dnbr
Differenced Normalized Burn Ratio (DNBR) subset (ArcInfo GRID)

jurx05b_pi
Fire Perimeter (shape file)

jurx05b_hist.xls
DNBR pixel count within the fire perimeter (excel file)

d304009030905
Full Scene DNBR (ArcInfo GRID)

Data_Quality_Information:

Attribute_Accuracy:

Attribute_Accuracy_Report:

Three on-board calibrators (two solar, one internal) provide an absolute accuracy of 5 percent, excluding band 6.

Logical_Consistency_Report:

These Landsat data are collected from a nominal altitude of 705 kilometers in a near-polar, near-circular, sun-synchronous orbit at an inclination of 98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days.

The pixels representing the bands for the image are in the data set only once.

Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual edits.

Positional_Accuracy:

Horizontal_Positional_Accuracy:

Horizontal_Positional_Accuracy_Report:

Energy reflected from Earth's surface passes through a whisk-broom scanning system and all-reflective optics before being collected by the solid-state detectors at the focal plane.

Lineage:

Process_Step:

Process_Description:

These data products are derived from Landsat Thematic Mapper data.

A pre-fire scene and a post-fire scene are analyzed to create a Differenced Normalized Burn Ratio (DNBR) image. The DNBR image portrays the variations of burn severity within the fire.

The Landsat images are terrain corrected and geometrically rectified to an Albers Conical Equal Area map projection using the National Landsat Archive Production System (NLAPS). The images are further processed to convert bands 1-5 and 7 to at-satellite-reflectance. The Normalized Burn Ratio (NBR) is computed for each date of imagery using the following formula:

$$(\text{Band 4} - \text{Band 7}) / (\text{Band 4} + \text{Band 7}) = \text{NBR}$$

The differenced NBR is computed by subtracting the post-fire NBR from the pre-fire NBR:

PreNBR - PostNBR = DNBR

Higher DNBR values are correlated with more severe burns. The DNBR image is evaluated to determine the threshold value between burned and unburned areas. The perimeter of the fire is delineated using the DNBR image. The DNBR image, the pre-fire and post-fire TM images, and a fire perimeter vector file are provided in digital format in the map projection used by the National Park Service.
