### Description:

#### Abstract:

The U.S. Geological Survey (USGS) has entered into a cooperative agreement with the National Park Service (NPS) to deliver satellite imagery and derivative products centered on major fires that impact national parks and other federal lands. This data set was compiled at the request of a federal land management agency and is part of a suite of products generated for a specific fire.

See the National Burn Severity Mapping web site at:

[http://edc2.usgs.gov/fsp/severity/fire\\_main.asp](http://edc2.usgs.gov/fsp/severity/fire_main.asp)

#### Purpose:

The purpose of this project is to develop a robust mapping methodology and consistent data products that allow federal land managers and fire ecologists to evaluate and compare burn severity within individual fires and between fires across various ecosystems. These products will help land managers to more effectively plan, implement and monitor fire recovery activities.

### Supplemental\_Information:

Fire Names: Goiter

Agency: National Park Service

Land Management Unit: Noatak National Preserve

Date of Fire: 06/17/2005

Type of assessment: Extended

Acres within Fire Perimeter: 9800

Landsat Path and Row: 80/12

Pre-Fire Landsat Date/Scene ID:

Landsat 7; June 25, 2002/LE7080012000217650

Post-Fire Landsat Date/Scene ID:

Landsat 7; July 6, 2006/LE7080012000618750

Output Dataset Projection: Alaska Albers Conical Equal Area

Datum Name: NAD83

Spheroid Name: GRS80

1st Parallel: 55 00 00 N

2nd Parallel: 65 00 00 N

Central Meridian: -154 00 00

Lat of Origin: 50 00 00

Northing: 0.0

Easting: 0.0

Image subset Corner Coordinate (center of upper left pixel, projection meters)

ULX: -238020 LRX: -221040

ULY: 2034060 LRY: 2021790

Image subset size:

#Rows: 410

#Columns: 567

Pixel size: 30 meters

Bounding Box:

North Lat: 68 10 55 N

South Lat: 68 04 20 N

East Long: 159 16 45 W

West Long: 159 40 46 W

Latitude and Longitude within Fire Perimeter:

Lat: 68 07 40 N

Long: 159 29 42 W

Fire Perimeter: Perimeters manually digitized from 07/25/2005 Post fire Landsat 5 image

For further information on NLAPS and Landsat TM data, please refer to the metadata documentation found on the USGS Clearinghouse website at:

Data\_Quality\_Information:

Attribute\_Accuracy:

Attribute\_Accuracy\_Report:

Three on-board calibrators (two solar, one internal) provide an absolute accuracy of 5 percent, excluding band 6.

#### Logical\_Consistency\_Report:

These Landsat data are collected from a nominal altitude of 705 kilometers in a near-polar, near-circular, sun-synchronous orbit at an inclination of 98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days.

The pixels representing the bands for the image are in the data set only once.

Completeness\_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual edits.

#### Positional\_Accuracy:

##### Horizontal\_Positional\_Accuracy:

##### Horizontal\_Positional\_Accuracy\_Report:

Energy reflected from Earth's surface passes through a whisk-broom scanning system and all-reflective optics before being collected by the solid-state detectors at the focal plane.

#### Lineage:

##### Process\_Step:

##### Process\_Description:

These data products are derived from Landsat Thematic Mapper data. A pre-fire scene and a post-fire scene are analyzed to create a Differenced Normalized Burn Ratio (DNBR) image. The DNBR image portrays the variations of burn severity within the fire.

The Landsat images are terrain corrected and geometrically rectified to an Albers Conical Equal Area map projection using the National Landsat Archive Production System (NLAPS). The images are further processed to convert bands 1-5 and 7 to at-satellite-reflectance.

The Normalized Burn Ratio (NBR) is computed for each date of imagery using the following formula:

$$(\text{Band 4} - \text{Band 7}) / (\text{Band 4} + \text{Band 7}) = \text{NBR}$$

The differenced NBR is computed by subtracting the post-fire NBR from the pre-fire NBR:

$$\text{PreNBR} - \text{PostNBR} = \text{DNBR}$$

Higher DNBR values are correlated with more severe burns. The DNBR image is evaluated to determine the threshold value between burned and unburned areas. The perimeter of the fire is delineated using the DNBR image. The DNBR image, the pre-fire and post-fire TM images, and a fire perimeter vector file are provided in digital format in the map projection used by the National Park Service.
