      Online_Linkage: http://edc.usgs.gov
  Description:
    Abstract:
      The U.S. Geological Survey (USGS) has entered into a cooperative
      agreement with the National Park Service (NPS) to deliver satellite
      imagery and derivitive products centered on major fires that
      impact national parks and other federal lands. This data set was
      compiled at the request of a federal land management agency and is
      part of a suite of products generated for a specific fire.
      See the National Burn Severity Mapping web site at:
      http://edc2.usgs.gov/fsp/severity/fire_main.asp
    Purpose:
      The purpose of this project is to develop a robust mapping
      methodology and consistent data products that allow federal land
      managers and fire ecologists to evaluate and compare burn severity
      within individual fires and between fires across various
      ecosystems. These products will help land managers to more
      effectively plan, implement and monitor fire recovery activities.
    Supplemental_Information:
      Fire Name: Imelyak
      Agency: National Park Service
      Land Management Unit: Noatak National Preserve
      Date of Fire: 6/17/2005
      Type of assessment: Initial Assessment
      Acres within Fire Perimeter: 7390
      Landsat Path and Row: 78/12
      Pre-Fire Landsat Date/Scene ID:
      Landsat 7; July 29, 2002/LE7078012000221050
      Post-Fire Landsat Date/Scene ID:
      Landsat 7; July 21, 2005/LE7078012000520250
      Output Dataset Projection: Albers Conical Equal Area
      Spheroid: GRS80
      Datum: NAD83
      Latitude of 1st standard parallel: 55 00 00 N
      Latitude of 2nd standard parallel: 65 00 00 N
      Longitude of central meridian: 154 00 00 W
      Latitude of origin of projection: 50 00 00 N
      False easting: 0 meters
      False northing at origin: 0 meters
      Image subset Corner Coordinate (center of upper left pixel, projection meters)
      ULX: -238500   LRX: -164610
      ULY: 2033790   LRY: 1983390
      Image subset size:
      #Rows: 1681
      #Columns: 2464
      Pixel size: 30 meters
      Bounding Box:
      North Lat: 68 12 01 N
      South Lat: 67 44 43 N

```
      East Long: 157 54 22 W
      West Long: 159 39 11 W
      Latitude and Longitude within Fire Perimeter
      Lat:   67 54 03 N
      Long: 158 12 00 W

      Fire Perimeter: Perimeter was manually digitized from landsat imagery.

      For further information on NLAPS and Landsat TM data, please refer to the metadata
      documentation found on the USGS Clearinghouse website at:
      http://www.fgdc.gov/clearinghouse/clearinghouse.html

      Product List:

      imel05a_pretm.tif
      Pre-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

      imel05a_postm.tif
      Post-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

      imel05a_dnbr
      Differenced Normalized Burn Ratio (DNBR) subset (ArcInfo GRID)

      imel05a_pr
      Fire Perimeter (shape file)
      Fire perimeter has been revised by NOAT and named according to the NWCG GIS Standard
Operating Procedures.
      200500721_1200_Imelyak_NWAK-305_per_poly_AK_Albers_NAD83

      imel05a_hist.xls
      DNBR pixel count within the fire perimeter (excel file)

      d781207020705
      Full Scene DNBR  (ArcInfo GRID)

Data_Quality_Information:
   Attribute_Accuracy:
      Attribute_Accuracy_Report:
         Three on-board calibrators (two solar, one internal) provide an absolute
         accuracy of 5 percent, excluding band 6.
   Logical_Consistency_Report:
      These Landsat data are collected from a nominal altitude of 705 kilometers
      in a near-polar, near-circular, sun-synchronous orbit at an inclination of
      98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days.
      The pixels representing the bands for the image are in the data set only once.
   Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual
edits.

   Positional_Accuracy:
      Horizontal_Positional_Accuracy:
         Horizontal_Positional_Accuracy_Report:
            Energy reflected from Earth's surface passes through a whisk-broom scanning
            system and all-reflective optics before being collected by the solid-state
            detectors at the focal plane.
   Lineage:
      Process_Step:
         Process_Description:
            These data products are derived from Landsat Thematic Mapper data.
            A pre-fire scene and a post-fire scene are analyzed to create a
            Differenced Normalized Burn Ratio (DNBR) image.  The DNBR image portrays
            the variations of burn severity within the fire.

            The Landsat images are terrain corrected and geometrically rectified
            to an Albers Conical Equal Area map projection using the National
```

```
        Landsat Archive Production System (NLAPS).  The images are further
        processed to convert bands 1-5 and 7 to at-satellite-reflectance.
        The Normalized Burn Ratio (NBR) is computed for each date of imagery
        using the following formula:
        (Band 4 - Band 7) / (Band 4 + Band 7) = NBR

        The differenced NBR is computed by subtracting the post-fire NBR from
        the pre-fire NBR:
        PreNBR - PostNBR = DNBR

        Higher DNBR values are correlated with more severe burns.  The DNBR
        image is evaluated to determine the threshold value between burned and
        unburned areas.  The perimeter of the fire is delineated using the DNBR
        image.  The DNBR image, the pre-fire and post-fire TM images, and a
        fire perimeter vector file are provided in digital format in the map
        projection used by the National Park Service.
