Description:

Abstract:

The U.S. Geological Survey (USGS) has entered into a cooperative agreement with the National Park Service (NPS) to deliver satellite imagery and derivative products centered on major fires that impact national parks and other federal lands. This data set was compiled at the request of a federal land management agency and is part of a suite of products generated for a specific fire.

See the National Burn Severity Mapping web site at:

http://edc2.usgs.gov/fsp/severity/fire_main.asp

Purpose:

The purpose of this project is to develop a robust mapping methodology and consistent data products that allow federal land managers and fire ecologists to evaluate and compare burn severity within individual fires and between fires across various ecosystems. These products will help land managers to more effectively plan, implement and monitor fire recovery activities.

Supplemental_Information:

Fire Names: Grapevine, Rx300, Long Jim 2, Shoshone; Lone Tree; Unknown

Agency: National Park Service

Land Management Unit: Grand Canyon National Park

Date of Fires: Grapevine, Rx300, Long Jim 2, Shoshone in 2006; Lone Tree in 2007; Unknown

Type of assessment: 2006 fires: Extended; 2007 Fire: Initial; Unknown

Acres within Fire Perimeter: 890, 390, 1630, 1070; 930; 1750

Landsat Path and Row: 37/35

Pre-Fire Landsat Date/Scene ID:

Landsat 5; July 14, 2005/LT5037035000519510

Post-Fire Landsat Date/Scene ID:

Landsat 5; July 4, 2007/LT5037035000718510

Output Dataset Projection: UTM

UTM Zone: 12

Datum Name: NAD83

Spheroid Name: GRS80

Image subset Corner Coordinate (center of upper left pixel, projection meters)

ULX: 390240 LRX: 413310

ULY: 3996510 LRY: 3975540

Image subset size:

#Rows: 700

#Columns:770

Pixel size: 30 meters

Bounding Box:

North Lat: 36 06 30 N

South Lat: 35 55 10 N

East Long: 111 57 42 W

West Long: 112 13 06 W

Latitude and Longitude within Fire Perimeter:

Grapevine Lat:36 01 09 N Long: 112 03 49 W

Rx300 36 00 21 N 112 03 22 W

Long Jim 2 36 00 48 N 112 06 11 W

Shoshone 36 02 38 N 112 04 16 W

Lone Tree 35 59 44 N 112 05 20 W

Unknown 36 01 22 N 112 04 46 W

Fire Perimeter: Provided by Park personnel (except for Unknown which was digitized from imagery)

For further information on NLAPS and Landsat TM data, please refer to the metadata documentation found on the USGS Clearinghouse website at:

<http://www.fgdc.gov/clearinghouse/clearinghouse.html>

Product List:

grca06b_pretm.tif

July/2005 Pre-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

grca06b_postm.tif

July/2007 Post-Fire Landsat data subset (bands 1-5,7 Geo-TIFF format)

grca06b_dnbr

Differenced Normalized Burn Ratio (DNBR) subset (16 bit ArcInfo GRID)

grca06bp

Fire Perimeter (shape file) includes 'Unknown' fire

grca06b_hist.xls

DNBR pixel count within the fire perimeters (excel file)

d373507050707

07/05 - 07/07 Full Scene DNBR (16 bit ArcInfo GRID)

Data_Quality_Information:

Attribute_Accuracy:

Attribute_Accuracy_Report:

Three on-board calibrators (two solar, one internal) provide an absolute accuracy of 5 percent, excluding band 6.

Logical_Consistency_Report:

These Landsat data are collected from a nominal altitude of 705 kilometers in a near-polar, near-circular, sun-synchronous orbit at an inclination of 98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days.

The pixels representing the bands for the image are in the data set only once.

Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual edits.

Positional_Accuracy:

Horizontal_Positional_Accuracy:

Horizontal_Positional_Accuracy_Report:

Energy reflected from Earth's surface passes through a whisk-broom scanning system and all-reflective optics before being collected by the solid-state detectors at the focal plane.

Lineage:

Process_Step:

Process_Description:

These data products are derived from Landsat Thematic Mapper data. A pre-fire scene and a post-fire scene are analyzed to create a Differenced Normalized Burn Ratio (DNBR) image. The DNBR image portrays the variations of burn severity within the fire.

The Landsat images are terrain corrected and geometrically rectified to an Albers Conical Equal Area map projection using the National Landsat Archive Production System (NLAPS). The images are further processed to convert bands 1-5 and 7 to at-satellite-reflectance.

The Normalized Burn Ratio (NBR) is computed for each date of imagery using the following formula:

$$(\text{Band 4} - \text{Band 7}) / (\text{Band 4} + \text{Band 7}) = \text{NBR}$$

The differenced NBR is computed by subtracting the post-fire NBR from the pre-fire NBR:

$$\text{PreNBR} - \text{PostNBR} = \text{DNBR}$$

Higher DNBR values are correlated with more severe burns. The DNBR image is evaluated to determine the threshold value between burned and unburned areas. The perimeter of the fire is delineated using the DNBR image. The DNBR image, the pre-fire and post-fire TM images, and a fire perimeter vector file are provided in digital format in the map projection used by the National Park Service.
