Title: Chilton, Chilton South, Stegall Mountain, Pole Cat Hollow Fires
of Ozark National Scenic Riverways & Mark Twain National Forest - 2006

Geospatial_Data_Presentation_Form:

Raster digital data.

Vector data are also available as ArcView Shape Files.

Description:

Abstract:

The U.S. Geological Survey (USGS) has entered into a cooperative agreement with the National Park Service (NPS) to deliver satellite imagery and derivative products centered on major fires that impact national parks and other federal lands. This data set was compiled at the request of a federal land management agency and is part of a suite of products generated for a specific fire.

See the National Burn Severity Mapping web site at:

http://edc2.usgs.gov/fsp/severity/fire_main.asp

Purpose:

The purpose of this project is to develop a robust mapping methodology and consistent data products that allow federal land managers and fire ecologists to evaluate and compare burn severity within individual fires and between fires across various ecosystems. These products will help land managers to more effectively plan, implement and monitor fire recovery activities.

Supplemental_Information:

Fire Names: Chilton, Chilton South, Stegall Mountain, Pole Cat Hollow (Mark Twain National Forest)

Agency: National Park Service

Land Management Units: Ozark National Scenic Riverways & Mark Twain National Forest

Dates of Fires:

Chilton: 4/4/2006

Chilton South: Unknown

Stegall Mountain: 2/28/2006

Pole Cat Hollow (Mark Twain National Forest): 3/3/2006

Type of assessment: Extended Assessment

Acres within Fire Perimeter:

Chilton: 830

Chilton South: 490

Stegall Mountain: 1340

Pole Cat Hollow (Mark Twain National Forest): 1500

Landsat Path and Row: 24/34

Pre-Fire Landsat Date/Scene ID:

Landsat 5; June 28, 2003/LT5024034000317910

Post-Fire Landsat Date/Scene ID:

Landsat 5; July 6, 2006/LT5024034000618710

Output Dataset Projection: UTM

UTM Zone: 15

Datum Name: NAD83

Spheroid Name: GRS80

Image subset Corner Coordinate (center of upper left pixel, projection meters)

ULX: 643380 LRX: 691830

ULY: 4117470 LRY: 4073970

Image subset size:

#Rows: 1451

#Columns: 1616

Pixel size: 30 meters

Bounding Box:

North Lat: 37 11 20 N

South Lat: 36 47 50 N

East Long: 90 50 39 W

West Long: 91 23 19 W

Latitude and Longitude within Fire Perimeter:

Chilton: Lat: 36 55 36 N Long: 90 59 43 W

Chilton South: Lat: 36 55 06 N Long: 90 58 41 W

Stegall Mountain: Lat: 37 04 53 N Long: 91 12 17 W

Pole Cat Hollow (Mark Twain): Lat: 36 53 13 N Long: 91 10 34 W

Fire Perimeter: Fire perimeters for Chilton, Chilton South and Stegall Mountain were provided by Ozark National Scenic Riverways. Fire perimeter for Pole Cat Hollow (Mark Twain National Forest) was manually digitized from Landsat imagery.

For further information on NLAPS and Landsat TM data, please refer to the metadata documentation found on the USGS Clearinghouse website at:

Data_Quality_Information:

Attribute_Accuracy:

Attribute_Accuracy_Report:

Three on-board calibrators (two solar, one internal) provide an absolute accuracy of 5 percent, excluding band 6.

Logical_Consistency_Report:

These Landsat data are collected from a nominal altitude of 705 kilometers

in a near-polar, near-circular, sun-synchronous orbit at an inclination of 98.2 degrees, imaging the same 183-km swath of Earth's surface every 16 days.

The pixels representing the bands for the image are in the data set only once.

Completeness_Report: Fire perimeter was automated, (seed value 425, distance 325) with manual edits.

Positional_Accuracy:

Horizontal_Positional_Accuracy:

Horizontal_Positional_Accuracy_Report:

Energy reflected from Earth's surface passes through a whisk-broom scanning system and all-reflective optics before being collected by the solid-state detectors at the focal plane.

Lineage:

Process_Step:

Process_Description:

These data products are derived from Landsat Thematic Mapper data.

A pre-fire scene and a post-fire scene are analyzed to create a Differenced Normalized Burn Ratio (DNBR) image. The DNBR image portrays the variations of burn severity within the fire.

The Landsat images are terrain corrected and geometrically rectified to an Albers Conical Equal Area map projection using the National Landsat Archive Production System (NLAPS). The images are further processed to convert bands 1-5 and 7 to at-satellite-reflectance. The Normalized Burn Ratio (NBR) is computed for each date of imagery using the following formula:

$$(\text{Band 4} - \text{Band 7}) / (\text{Band 4} + \text{Band 7}) = \text{NBR}$$

The differenced NBR is computed by subtracting the post-fire NBR from the pre-fire NBR:

$$\text{PreNBR} - \text{PostNBR} = \text{DNBR}$$

Higher DNBR values are correlated with more severe burns. The DNBR image is evaluated to determine the threshold value between burned and unburned areas. The perimeter of the fire is delineated using the DNBR image. The DNBR image, the pre-fire and post-fire TM images, and a fire perimeter vector file are provided in digital format in the map projection used by the National Park Service.
